

Introduction

Enhancing Our Heritage. Expanding Our Influence. Pursuing Our Mission.

We encourage and equip medical practitioners to provide an evidence-based rationale for defending the lives of both the pregnant mother and her pre-born child.

We are the largest organization of pro-life women's health medical professionals in the world. We are OBGYNs, Family Medicine physicians, and Advanced Practice Clinicians who work in reproductive health. We know what it is like to practice life-affirming medicine in a hostile environment. We understand the need for absolutely accurate and scientifically irrefutable information. We are committed to serving you.

We strive to provide you with a network of pro-life physicians for mentoring and support and communication, and within that network be able to mentor the next generation of pro-life physicians and other medical practitioners. We want to make available to you the most accurate, up to date information on the effects of abortion on women so that you will have an evidence-based response to the pressures to endorse abortion.

Mission

AAPLOG exists to encourage and equip its members and other concerned medical practitioners to provide an evidence-based rationale for defending the lives of both the pregnant mother and her pre-born child.

Vision

We aim to make known the evidence-based effects of abortion on women as well as the scientific fact that human life begins at the moment of fertilization, with the goal that all women, regardless of race, creed or national origin, will be empowered to make healthy and life-affirming choices. AAPLOG's organizational vision is to be the pre-eminent medical voice that informs the medical community, policy makers and the public on the importance of declining to use death as a therapeutic option, which respects the dignity of all human life and prohibits the taking of a life by a medical practitioner, including the lives of pre-born children.
