

"I had never even heard of the concepts this course covered despite being a 4th year medical student in my last semester at a prestigious medical school. This information about cervical mucus and the impact hormones have on it should be taught routinely in the pre-clinical years."

– M.B.P.

Patient Interest in Fertility Awareness is growing.

As a health professional student or medical resident, it is important that **YOU** are well informed, so you may offer a more comprehensive array of options for women.

Enroll in our Elective

Fertility Awareness Based Methods (FABMs) for Women's Health and Family Planning is our 2-week online course focusing on the basic principles of FABMs, the science behind how they work, their effectiveness for family planning and how they may be used in the diagnosis and treatment of common reproductive health issues.

This course will also provide an opportunity for students to observe trained FABM educators and clinicians as they share this information with clients and patients. Medical and health professional students or residents at any accredited program are encouraged to learn more.

Sign up today!
